General overview of steps in data downloading

Baselinedata 241106 – 250302 (Sahlgrenska Academy Facebook ad)

Tuesday 250401

The last downloaded **baseline** data files from **Sunet Survey** for the Facebook recruited men and women for PainSens_PROM were done **250401.**

This raw file is saved under
H:\PainSens_AnnasFolder\PainSensitivity_PROM_Anna\DATA_PainSens_PROM\BARA_ANNA\DATA_Management\RawData_Baseline\ BaselineDataFinal_Facebook_250401

The name of this raw file is **RAWdata _Baseline_Facebook_250401**

The steps below were earlier done on my laptop, but now with this new data collected it will be done on the TRE server GothPain. (The steps for the earlier files can be seen in **DataManagement_SunetSurvey_Excel_240329**.)

The file downloaded from Sunet Survey is an Excel file that will be adjusted into a file with ending **_b**.

1. Name the variable ID into ID_old. Add the variable ID as first column (A). Code **ID** into **ID+3000** and call the old ID → ID_old
2. Add the variable **Group: 6 = Facebook** (1=Fibro and 2=Head, 3=Reuma, 4=Personskade and 5=ANS) after the ID_old (first columns will be ID, ID_old, Group).

After this the following steps will give a file that you name with ending **Adj_**.

3. Change VAR02 (**personnummer**) from "allmänt" to "tal". Then the number should show year of birth, month, day and four personal numbers.
4. Delete the variables VAR01 (**names**) and VAR03 (**email**)
5. Change type of Svarstillfälle to "short date" format.
6. Change 999 to empty cell : För alla variabler från VAR04_1 och alla därefter

Nu är det dags att sammanfoga den mergade datafilen från patientorganisationer och ANS, **Adj_FINAL_Pilot1_240304_240321**, ihop med denna nya **Facbook fil, Adj_ RAWdata _Baseline_Facebook_250401_b**.

Kalla denna slut fil för baseline **PainSensPROM_Baseline_250401 och den ligger i mappen H:\PainSens_AnnasFolder\PainSensitivity_PROM_Anna\DATA_PainSens_PROM\BARA_ANNA\DATA_Management\RawData_Baseline\Total_Baseline_File**

➔ Spara nu ner en csv-fil utan fliken med variabelförteckning, ge den samma namn.

Sedan görs det som står i General overview of data cleaning, som jag tror jag skrivit R-kod på och ytterligare R-kod jag skrivit

LOGG för analyser mm ligger **INTE** på TRE**.** Vill komma åt dem utanför TRE.
I TRE ligger **data magement, R-code, data files.**

Thursday 250424

ERROR: Found an error in the file exported from R: ID2005 has an impossible value on nrs_move7d (-143). Need to be corrected in R.
